

The application serves primarily to connect the user to two core functionalities: The Calendar and the Habit Tracker. The Calendar tracks what you do daily using the event boolean on a task. This information is shared with your To-do, where non-event tasks are held. The Calendar holds Events and Tags, the primary way to keep track of your tasks. If you only want to see specific tasks, you can use the Filter tool to see only matching tasks. The Habit Tracker uses the data from the calendar to help the user see how consistent they are day to day, completing their task.

DIAGRAMS REFUSE TO BE ON THIS PAGE. THEY ARE BELOW.

- **Task**

- id: string
- title: string
- color: string
- event: boolean
- tags: Tag[]
- description: string
- startDate: Date
- endDate: Date
- isVisible: boolean
- completed: Status
- userId: string

- **Tag**

- id: string
- name: string
- color: string

- **Calendar**

- tasks: Task[]
- isEvent(tasks: Task[]): void

- **Header**

- activePage: ViewType

- menu: boolean
- switchView(view: string): void
- **ViewType**
 - view: string
- **ToDo**
 - tasks: Task[]
 - startDate: Date
 - endDate: Date
 - isEvent(tasks: Task[]): void
- **Login**
 - email: string
 - password: string
 - handleLogin(): void
- **HabitTracker**
 - tasks: Task[]
 - day: Date
 - getCircleStyle(numComplete: number, totalTask: number): string
- **Filter**
 - tags: Tag[]
 - startDate: Date
 - endDate: Date
 - title: string
 - active: boolean

- isVisible(task: Task[]): void
